

The github repository, ecommerce-product-page-team, is empty

```
# Initialize git if not done
```

```
git init
```

```
# Add all project files
```

```
git add -A
```

```
# Commit them
```

```
git commit -m "Initial commit - add ecommerce product page files"
```

```
# Set main as the default branch name
```

```
git branch -M main
```

```
# Link your GitHub repo as the remote
```

```
git remote add origin https://github.com/shawnchan68/ecommerce-product-page-team.git
```

```
# Push to GitHub (this creates 'main' remotely)
```

```
git push -u origin main
```

```
# Create a branch for your changes
```

```
git checkout -b feature/docker-cd-workflow
```

```
# Stage and commit added files
```

```
git add .
```

```
git commit -m "feat: initial commit with Dockerfile, nginx.conf, vite config, and cd.yaml"
```

```
# Push everything to GitHub  
git push -u origin feature/docker-cd-workflow
```

Create the Pull Request (PR)

1. Go to your GitHub repo page:
<https://github.com/shawnchan68/ecommerce-product-page-team>
2. You'll see a **green “Compare & pull request”** button.
3. Click it, fill in the title and description, and click **Create pull request**.
4. On the next page, click **Merge pull request → Confirm merge**.

Additional Note:

Run build locally to confirm output:

```
npm run build
```

```
npx serve dist # quick test before docker build
```
